The Australian Curriculum: Mathematics aims to ensure that students:

• are confident, creative users and communicators of mathematics, able to investigate, represent and interpret situations in their personal and work lives and as active citizens
• develop an increasingly sophisticated understanding of mathematical concepts and fluency with processes, and are able to pose and solve problems and reason in Number and Algebra, Measurement and Geometry, and Statistics and Probability
• recognise connections between the areas of mathematics and other disciplines and appreciate mathematics as an accessible and enjoyable discipline to study.

The Australian Curriculum: English aims to ensure that students:

• learn to listen to, read, view, speak, write, create and reflect on increasingly complex and sophisticated spoken, written and multimodal texts across a growing range of contexts with accuracy, fluency and purpose
• appreciate, enjoy and use the English language in all its variations and develop a sense of its richness and power to evoke feelings, convey information, form ideas, facilitate interaction with others, entertain, persuade and argue
• understand how Standard Australian English works in its spoken and written forms and in combination with non-linguistic forms of communication to create meaning
• develop interest and skills in inquiring into the aesthetic aspects of texts, and develop an informed appreciation of literature.

The Australian Curriculum: Science aims to ensure that students develop:

• an interest in science as a means of expanding their curiosity and willingness to explore, ask questions about and speculate on the changing world in which they live
• an understanding of the vision that science provides of the nature of living things, of the Earth and its place in the cosmos, and of the physical and chemical processes that explain the behaviour of all material things
• an understanding of the nature of scientific inquiry and the ability to use a range of scientific inquiry methods, including questioning; planning and conducting experiments and investigations based on ethical principles; collecting and analysing data; evaluating results; and drawing critical, evidence-based conclusions
• an ability to communicate scientific understanding and findings to a range of audiences, to justify ideas on the basis of evidence, and to evaluate and debate scientific arguments and claims
• an ability to solve problems and make informed, evidence-based decisions about current and future applications of science while taking into account ethical and social implications of decisions
• an understanding of historical and cultural contributions to science as well as contemporary science issues and activities and an understanding of the diversity of careers related to science

• a solid foundation of knowledge of the biological, chemical, physical, Earth and space sciences, including being able to select and integrate the scientific knowledge and methods needed to explain and predict phenomena, to apply that understanding to new situations and events, and to appreciate the dynamic nature of science knowledge.

The Australian Curriculum: History aims to ensure that students develop:

• interest in, and enjoyment of, historical study for lifelong learning and work, including their capacity and willingness to be informed and active citizens

• knowledge, understanding and appreciation of the past and the forces that shape societies, including Australian society

• understanding and use of historical concepts, such as evidence, continuity and change, cause and effect, perspectives, empathy, significance and contestability

• capacity to undertake historical inquiry, including skills in the analysis and use of sources, and in explanation and communication.

The Australian Curriculum: Geography aims to ensure that students develop:

• a sense of wonder, curiosity and respect about places, people, cultures and environments throughout the world

• a deep geographical knowledge of their own locality, Australia, the Asia region and the world

• the ability to think geographically, using geographical concepts

• the capacity to be competent, critical and creative users of geographical inquiry methods and skills

• as informed, responsible and active citizens who can contribute to the development of an environmentally and economically sustainable, and socially just world.

The Arts, Technologies, and Health and Physical Education are awaiting final endorsement.
